High Peaks Hospice (HPH) does not to initiate CPR (cardiopulmonary resuscitation). Patients who want CPR or other resuscitation measures are still eligible for hospice services. If a patient or representative chooses not to execute a DNR (Do Not Resuscitate) order, the following Waiver of DNR should be completed.

I understand CPR and other resuscitation measures are not services offered by High Peaks Hospice.

It is the responsibility of my family member or another non-hospice caregiver to initiate the Emergency Medical Services system by dialing 911 or the appropriate emergency number for my area.

I understand that if CPR or other resuscitation measures are initiated I will be discharged from hospice services and I will be responsible for all costs incurred by calling the emergency team, including transportation to the nearest emergency room, and any other costs incurred as a result of the resuscitation effort.

I understand the above statements, and elect not to execute a “Do Not Resuscitate” DNR order.
